

BasicBilly™

The affordable basic life support simulator for effective training with realistic force and compression values

- Two-in-one: easily switch between child and adult manikin set up
- Hygienic and economical to use, specially suited for large classes
- Realistic feedback for an immediate learning effect
- Easy to carry and extremely robustly built

The BasicBilly™ CPR Manikin fulfills the latest guidelines from the AHA (American Heart Association) and ERC (European Resuscitation Council) on CPR and was designed with optimal force and compression values in mind. With cardiac failure as one of the leading causes of death, let BasicBilly™ show that it is not difficult to provide help and save lives through correct cardiac massage and ventilation technique.

Basic-Life-Support Simulator BasicBilly™ features:

BasicBilly™ is both anatomically correct and hygienic to use. The head is easy to tilt in order to open the airways for mouth-to-mouth and mouth-to-nose resuscitation. Additionally, the thorax raises as the lungs are ventilated. Mask ventilation is also possible and BasicBilly™ comes with 10 lung bags and 1 additional face mask for hygienic reasons. Low priced disposable airways and a carrying bag ensure hygienic and easy care of the manikin.

Even better, BasicBilly™ is actually two manikins in one as it can be used as either an adult or a child (of approximate age of 12). Just use the easy and interchangeable springs located in the back of the trainer to give the realistic depth feedback of either the adult (5 cm) or child (4.5 cm).

› Delivery contents:

BasicBilly™

- 1 BLS simulator (torso) with spring for cardiac massage of adults
