Our innovative
ANSI Block

Find the ANSI Class, Type and Person Count fast with our unique **ANSI Block** on most ANSI 2015 first aid kits and cabinets we sell. Identifying ANSI 2015 made easy with First Aid Only.

Two Classes of ANSI 2015 Kits

The 2015 ANSI revision introduces two classes of first aid kits.

Class A kits with contents designed to deal with most common types of workplace injuries.

Class B kits with a broader range and quantity of supplies to deal with injuries in more complex or high-risk environments.

Types of ANSI 2015 Kits

The kit containers are classified by portability, ability to be mounted, resistance to water, and corrosion and impact resistance.

Type I Intended for use in stationary, indoor applications where kit contents have minimal potential for damage due to environmental factors and rough handling. These kits are not intended to be portable and should have a means for mounting in a fixed position. Some applications for Type I first aid kits are general indoor use, office use or use in a manufacturing facility. First aid cabinets would generally fall into this type.

Type II Intended for use in portable indoor applications where the potential for damage due to environmental factors and rough handling is minimal. These kits should be equipped with a carrying handle. Some applications for Type II first aid kits are general indoor use, or use in office or manufacturing environments that require mobile kits.
