Unit Title: Weather vs. Climate
Lesson: Climate Factors Past and Present
Time Requirement: 90 minutes

Submitted by: Karen McCabe
Recommended Grade Level: Grade 8
Discipline: Earth and Space Science
Topic: Climate

Required Materials:
1. Computer with internet access for each student group
2. “Climate Factors: Past and Present” handout
3. Internet Resources
   A Student's Guide to Climate Change: http://www.epa.gov/climatechange/kids/

Lesson Objective:
Students will formulate working definitions of weather and climate and use the Internet to research and identify factors that affect Earth’s climate system.

National Science Standards Alignment
Earth and Space Science

   • Structure of the Earth system
   • Global patterns of atmospheric movement influence local weather.

Abilities Necessary to Do Scientific Inquiry

   • Use appropriate tools and techniques to gather, analyze and interpret data.
   • Develop descriptions, explanations, predictions, and models using evidence.
   • Think critically and logically to make the relationships between evidence and explanations.

Recommended Ward’s Science Materials

Atmospheric Convection Apparatus Item No. 807012
Earth’s Atmosphere, Weather and Climate DVD Item No. 1950359
Ward’s DataHub: Environmental Science Item No. 9200501

Procedure

*Note: This lab activity was submitted to Ward’s Science by a third party educator for the sole purpose of sharing content and ideas with other educators. Ward’s Science is not affiliated with the author of this lesson plan. All product recommendations made by Ward’s Science are suggestions for completion or extension of the activity or topics addressed, but are not required to complete the activity.
1. Engage students in whole class brainstorming session about the differences between weather and climate.

2. Draw a T-chart for Weather and climate on chalkboard or interactive whiteboard.

3. Allow students to discuss and record their ideas of what factors comprise weather and climate.

4. Guide students as they formulate an accepted definition for weather and climate.

5. Record the class definitions on the chart.

6. Form student groups of 3-4 and assign them to a computer with internet access.

7. Go to the Weather Eye Web site (http://weathereye.kgan.com/cadet/climate/climate_vs.html) to read an explanation about weather vs. climate.

9. Students will complete the chart found on “Climate Factors Past and Present” handout.

10. Handouts will be collected and graded.

Climate Factors: Past and Present

Directions: Use the Learn the Basics tab found on the Kids Guide to Climate Change website found at http://www.epa.gov/climatechange/kids/basics/past.html to complete the following.

I. Explain three reasons why today’s climate change is different than the climate change of the past.

_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________

II. Complete the table below to examine natural factors that affect climate.
